

StoneCarpet

Natural Strength. Seamless Design.

Our StoneCarpet system is made from carefully selected natural stones bonded with high-performance binder, creating a strong yet permeable surface. We offer three different stone types - quartz, granite, and marble - each available in a range of natural colours to match different styles and environments.

StoneCarpet can be installed on existing solid surfaces such as concrete or asphalt. It can also be installed on a well-prepared, compacted aggregate base (in Denmark this could be Drænstabil®) ensuring optimal stability and drainage.

We provide detailed guides for both base layer and top layer installation.

- Suitable for both indoor and outdoor use.
- UV-resistant binder that ensures a natural and lasting appearance.
- SUDS-/LAR compliant - highly permeable surface.
- Can be installed both horizontally and vertically.
- Made from natural quartz, granite or marble aggregates - available in multiple colours and design combinations.

If you are interested in learning more about our product ranges, please feel free to contact us for a professional consultation. You can also explore our full range of products and find inspiration on our website - simply scan the QR code below.
